

Appl. No.: 10/083,432  
Amdt. dated 03/20/2006  
Reply to Official Action of December 20, 2005

Amendments to the Claims:

1. (Currently Amended) A method in a system wherein a user equipment and another party are enabled to exchange transaction data, the method comprising:  
generating a data entity that associates with a transaction;  
including information of an object that associates with the transaction in the data entity;  
transmitting the data entity from an element of a mobile communication network to the user equipment over a wireless interface; and  
downloading to the user equipment additional information that associates with the transaction based on said information of the object.
2. (Original) A method as claimed in claim 1, wherein the information of the object comprises a communication network address of the object.
3. (Original) A method as claimed in claim 1, wherein the information of the object comprises a universal resource locator (URL).
4. (Original) A method as claimed in claim 1, wherein the object comprises a storage means for storing information that associates with the subject of the transaction.
5. (Original) A method as claimed in claim 1, wherein the user equipment initiates procedure for establishment of a communication media between the user equipment and the object based on said information of the object.
6. (Original) A method as claimed in claim 1, wherein the object is controlled by a third party.
7. (Original) A method as claimed in claim 1, wherein the object comprises a site in a data network.

Appl. No.: 10/083,432  
Amdt. dated 03/20/2006  
Reply to Official Action of December 20, 2005

8. (Previously Presented) A method as claimed in claim 7, wherein the site comprises a document that is retrievable from a server, said server being run by the producer of the object of the transaction.

9. (Original) A method as claimed in claim 1, wherein the additional information relates with at least one characteristic of the subject of the transaction.

10. (Original) A method as claimed in claim 9, wherein the at least one characteristic relates to a specific product or service.

11. (Original) A method as claimed in claim 1, wherein the additional information is provided by communication comprising speech.

12. (Original) A method as claimed in claim 11, wherein the user of the user equipment establishes a communication media with a person based on said information of the object.

13. (Original) A method as claimed in claim 1, wherein an indicator is displayed to the user of the user equipment based on said information of the object.

14. (Previously Presented) A method as claimed in claim 13, wherein the user may request additional information by selecting the displayed indicator.

15. (Original) A method as claimed in claim 1, wherein the data entity is for provision of a receipt.

16. (Original) A method as claimed in claim 1, wherein the data entity is for provision of an offer.

Appl. No.: 10/083,432  
Amdt. dated 03/20/2006  
Reply to Official Action of December 20, 2005

17. (Original) A method as claimed in claim 1, wherein the data entity is for provision of conditions for sale.

18. (Original) A method as claimed in claim 1, wherein the data entity is based on an electronic data card format.

19. (Cancelled)

20. (Currently Amended) A method as claimed in claim 1, wherein the user equipment communicates in a system wherein a user equipment and another party are enabled to exchange transaction data, the method comprising:

generating a data entity that associates with a transaction;

including information of an object that associates with the transaction in the data entity;

communicating via a local wireless link with another station for transmitting the data entity to the user equipment; and

downloading to the user equipment additional information that associates with the transaction based on said information of the object.

21. (Original) A method as claimed in claim 1, wherein the user equipment communicates via at least two different communication means.

22. (Withdrawn) A system wherein a user equipment and another party are enabled to exchange transaction data, comprising:

transaction means for processing a transaction between the user equipment and said other party, said transaction means being adapted to generate a data entity including transaction data and information of an object associated with the transaction;

communication means for transmission of the data entity to the user equipment over a wireless interface; and

Appl. No.: 10/083,432  
Amdt. dated 03/20/2006  
Reply to Official Action of December 20, 2005

control means at the user equipment for processing the received data entity, said control means being adapted to request for additional information based on said information of the object.

23. (Withdrawn) A system as claimed in claim 22, wherein the user equipment comprises a station of a cellular communication system.

24. (Withdrawn) A system as claimed in claim 22, wherein the user equipment comprises means for communication over a local wireless link.

25. (Currently Amended) A mobile user equipment adapted for processing electronic transactions, comprising:

communication mechanism means for communicating with a remote unit to be provided with a data entity transmitted to the mobile user equipment by ~~a remote unit~~ an element of a mobile communication network, said data entity including transaction data and information of an object associated with the transaction; and

control means for processing the data entity, said control means being adapted to request for additional information based on said information of the object.

26. (Currently Amended) Apparatus for facilitating communication of transaction data with a user-entity equipment, said apparatus comprising:

an element of a mobile communication network comprising communication means for transmitting a data entity to the user equipment over a wireless interface, the data entity including transaction data and information of an object associated with the transaction; and

control means of the user equipment for processing the received data entity, said control means configured to request for additional information based on said information of the object.

27. (New) A mobile user equipment adapted for processing electronic transactions, comprising:

Appl. No.: 10/083,432  
Amdt. dated 03/20/2006  
Reply to Official Action of December 20, 2005

communication mechanism means for communicating over a local wireless link with another station to be provided with a data entity transmitted to the mobile user equipment from the other station, said data entity including transaction data and information of an object associated with the transaction; and

control means for processing the data entity, said control means being adapted to request for additional information based on said information of the object.

28. (New) Apparatus for facilitating communication of transaction data with a user equipment, said apparatus comprising:

communication means for transmitting a data entity to the user equipment over a local wireless link with another station, the data entity including transaction data and information of an object associated with the transaction; and

control means of the user equipment for processing the received data entity, said control means configured to request for additional information based on said information of the object.
